Dashboard — Sign in and receive live updates

Private /dashboard link

• Capture #token= in localStorage. POST /api/realtime/tickets uses the bearer token; 30 s ticket is consumed once with GETDEL.

Subscribe before checking

• Redis DB 0: subscribe to events:user:{id}, then check token_version. Recheck every 20 s. /dashboard revokes old streams. Publishers: bot, workers and API.

Resync and reconnect

• Each open reloads all columns. Errors use a fresh ticket after jittered backoff. Same-origin nginx: /api/events unbuffered, 1 h read timeout. Events: task.created, task.updated, task.deleted.
