Voice message — Accept, transcribe, notify

Bot API — Accept once

• Reject >120 s or >10,000,000 bytes. Duplicate stops unless queued without acknowledgement. Store ack id before transcribe_voice_job on transcription.

worker-transcribe

• OpenAI or whisper-server; 450 s lease. Download, transcribe, extract title + description, then commit task + done. Publish task.created, enqueue notify_user on notification. Dashed failure replaces success: failed(kind), notify only, no event.

Return to Telegram

• worker-notify edits the acknowledgement to Task created: …. A missing acknowledgement falls back to a reply. Notification retries stop after five attempts.
